

THE NEW 2018 Micro Red Dot Sight

RED-DOT SIGHT

The CAA MRDS Micro Red-Dot Sight & Mount (new version 2018) is an optical sight with red dot. It was designed for mounting on a Picatinny rail and is ideally suited in combination with the CAA Micro Roni G4 or others.

After installation, the Red Dot Sight can be used immediately (note, a battery must of course be inserted!).

The CAA MRDS can be used in combination with the Folding Flip Up Front Sight (BGF) and Flip Up Rear Sight (BGR).

Another advantage is individual adjustment of the red dot. Depending on the application scenario and distance, this can be set in 11 steps, larger or smaller.

The optimal size of the insight and outlook favors the rapid targeting and targeting as well as the search.
